Such objections or suggestions should be addressed to the Secretary, Central Boilers Board, Ministry of Industry (Department of Industrial Development), Udyog Bhavan, New Delhi.

#### DRAFT REGULATIONS

1. These regulations may be called the Indian Boiler (Amendment) Regulations, 1978.

2. In the Indian Boiler Regulations, 1950, in regulation 360, for clause (b), the following clause shall be substituted, namely:—

“(b):— Where pipes are butt welded together such welds shall be effectively stress relieved only when a wall thickness exceeds 20 mm or carbon content of the material exceeds 0.25 per cent or pipes are made of alloy steel in accordance with the following:

(i) For carbon Steel, a stress relieving heat treatment shall be performed by heating the part to at least  $600+2^{\circ}\text{C}$ .

When required by the characteristics of the material, different temperatures may be necessary to obtain proper stress-relieving. The part to be stress-relieved shall be brought slowly up to the specified temperature and held at that temperature for a period proportionate on the basis of at least  $2\frac{1}{2}$  minutes per millimeter of the maximum thickness of the part (approximately one hour per twenty five millimeter of thickness) and shall be left to cool in the furnace to a temperature which, for parts with thickness greater than 20 millimeter does not exceed  $400^{\circ}\text{C}$ . After withdrawal from the furnace, the part shall be allowed to cool in a still atmosphere.

A temperature-time diagram of the stress-relieving process shall be provided when the Inspecting Authority requires it.

(2) For alloy steel a stress-relieving heat treatment shall be carried out on the basis of the composition of the alloy as shown in the table below:

TABLE

Type of Steel	Range of temperature	Time at temperature per 25 mm of thickness of plate
C $\frac{1}{2}$ MO		
$\frac{1}{2}$ Cr $\frac{1}{2}$ MO	620°—650°C	1 Hour (1 hour min.)
1 Cr $\frac{1}{2}$ MO		
$1\frac{1}{4}$ Cr. $\frac{1}{2}$ MO	620°—660°C	1 Hour (1 hour min.)
$2\frac{1}{4}$ Cr 1 MO	660°C—750°C	1 Hour (1 hour min.)

Heat treatment shall be carried out by one of the following methods:

(i) Local heating using a portable muffle induction coils, or other suitable heating appliance. Particular care shall be taken to apply

heat uniformly over the area to be treated. The use of procedures that do not provide adequate control for this purpose, such as manual operation of gas torches, is not permissible. The temperature shall be maintained symmetrically, over peripheral band of metal of a minimum width of three times the width of the butt welded preparation. The temperature shall be measured by thermo couples pinned, welded or otherwise, suitably attached to the surface of the pipe and, where necessary, protected from flame impingement.

(ii) Heating in stationary industrial furnace. The temperature of the joint shall be measured by thermo couples so disposed within the furnace as to give a true measure of the joint temperature."

$$W.P. = \frac{f}{A_2 + B_2} \times \left( \frac{T-O.75}{C} \right)^2 \times 100 \dots$$

Equation XII/12
